
PROJECT TOPIC - Clause IQ: Intelligent Legal Documents Processing Using Retrieval Augmented Generation

Programme: MCA

Project Group Members:

1. Shreyansh Agarwal (A-47/12584200182)
2. Ansh Pal Singh (A-6/12584200034)
3. Ayush Pathak (A-8/12584200052)
4. Rudransh Ramnani (A-40/12584200164)

Project Supervisor: Dr. Sachendra Singh Chauhan, Assistant Professor

Objective: The purpose of developing the ClauseIQ system is to build a Retrieval-Augmented Generation (RAG) based legal assistant that can provide accurate and context-aware answers to user queries. The system is designed to combine stored knowledge with real-time question understanding so that users receive reliable information instead of generic responses.

ClauseIQ works by finding the most relevant information from uploaded documents and using it to generate clear answers. This approach helps users understand legal content more easily, especially when dealing with long or complex documents. It is useful for getting quick, meaningful insights without manually searching through large amounts of text.

Tools Required

Hardware Requirements

- Computer / Laptop (Minimum 8 GB RAM recommended)
- Internet Connectivity
- Storage Device (SSD/HDD)

Software Requirements

- Operating System (Windows / Linux / macOS)
- Python (3.13.7)
- Vector Database (Chroma / FAISS)
- SQLite Database
- Ollama (for LLM integration)
- Web Browser

- Flask (Backend Framework)
- HTML, CSS, JavaScript

Outcome:
